About Me

Backend-focused software engineer with 7+ years of experience building production services and cloud infrastructure at Microsoft and Intel. Strong focus on distributed systems, cloud native implementations, and AI-assisted engineering workflows.

Experience

Microsoft

Software Development Engineer (Remote)

May 2021 – Aug 2026

Microsoft

- Built backend infrastructure for Microsoft Teams policy administration, supporting reliable management operations for enterprise customers.
- Collaborated on design and proof-of-concept to migrate a shared library out of a monolithic API gateway into an independent service, then owned the pre-production and production rollout on Azure Kubernetes, including logging, monitoring, and metrics.
- Led hardening of test-tenant account security following a security incident: automated account provisioning (cutting onboarding from multi-day manual work to fully automated) and implemented the org's first FIC-based authentication for test accounts, later adopted by other teams.
- Designed and implemented features for a PubSub SDK, including standardized order event handling, dead-letter queues, and bulk backfill tooling for migrating data during system deprecations, and for a job queue modernization effort improving reliability of distributed job processing.
- Participated in on-call rotations owning deployments, customer incidents, alerts, and security incidents; collaborated with partner teams and SREs to troubleshoot distributed system failures, including in air-gapped environments with restricted access.
- Worked in regulated cloud environments with GDPR, sovereign cloud, air-gapped deployments, and region-specific clouds.
- Improved developer productivity with agent-based workflows, including build parallelization across 12+ projects that reduced build time by 60%.

Intel

Software Development Engineer (Remote), October 2020 – May 2021

- Contributed to a service managing system tests for factory QA validation of Intel CPUs, including work on a compiler for a custom Test Package Language used to define product test packages.

Student Software Developer (In-Office), Mar. 2019 – Oct. 2020

- Developed and co-designed a web application used across Intel IT to request, approve, and create cloud accounts in Azure, AWS, and GCP.
- Co-designed and implemented modernization of the cloud provisioning request service to NextJS, NodeJS, and Postgres running on an internal Kubernetes cluster.

Education

Technological Institute of Costa Rica

Bachelor's Degree in Computer Science Engineering, 2015 – 2020

Skills

- **Languages:** C#, Python, SQL, JavaScript, HTML/CSS
- **Other languages:** C++, Java, Kotlin, Rust, Go
- **Cloud/Infrastructure:** Kubernetes, Docker, Azure, Azure DevOps, CI/CD
- **Backend:** ASP.NET, REST APIs, Microservices, pub/sub, job queues, security
- **AI Developer Tools:** Copilot, Claude, OpenCode, agentic workflows (MCP)
- **Languages:** Spanish (native), English (fluent)
